

Hello Cyberwolves

Over the last couple of weeks in Tokyo, team SA has been jumping over too many hurdles and not coming home with any gold medals. Back home, South Africa has been jumping through more turbulent political hurdles. Some perceived doom and gloom during this same period, yet, as with all dark clouds, there is a silver lining!

This week we celebrate some positive news for Team SA. Congratulations to Tatjana Schoenmaker, who set a new Olympic record in the heats of the women's 100m breaststroke at the Tokyo 2020 Olympic Games, setting a brilliant, unexpected Olympic record for SA. What has been most evident is that the world is #StrongerTogether. Ending off with a quote from Michael Phelps; "There will be obstacles. There will be doubters. There will be mistakes. But with hard work, there are no limits."

Wolfpack's Sim Chiwanza takes application security by the horns, and shares the importance of conducting a well-executed secure code review. [Read more here.](#)

The idea of prediction has been around for centuries, and we have always been fascinated by it. What makes predictions more real than ever before is that data fusion occurs, and the analytics can use your behavioural input to further its intelligence capability. In the Fourth Industrial Revolution (4IR), data is contributed by users, technology and cyber-physical interfaces. [Read](#)
