Hello Cyberwolves

There has been a disturbing trend these past few months when the very bastions of cybersecurity – the vendors or service providers that governments and private companies depend on for their security – are themselves compromised. The lesson is perhaps not that these companies are poorly equipped to provide the security services they offer, but that potentially any company could be the victim of an attack. Before wolves go in for the kill, they spend a considerable amount of time studying their prey. Wolves are masters at understanding environmental conditions and making the best strategic decisions based on the intelligence they have gathered. Let us take this time to evaluate our environment, formulate our approach and stick together.

Wolfpack Articles

Hunters get hunted

"However, whilst large scale breaches of personal records, whilst problematic for the companies involved, don't always result in making other companies vulnerable. This unfortunately is not the case for their customers who may have their sensitive

personal info accessible to scammers and spammers."

The cybersecurity tsunami

"According to the World Economic Forum's 2021 Global Risks Report, "cybersecurity is one of the key threats of the next decade" alongside the COVID-19 pandemic, climate change, and debt crises."

ZeroFOX

Let Ross Rustici take you through the top threat trends from 2020 and how he predicts cybersecurity will change in 2021. For more insights like these, check out the report on The Future of Digital Threats at <https://www.zerofox.com/videos/ross-rustici-protect-today-predict-tomorrow/>.

COOL TECH

"As technology continues to progress, the conversation around data protection becomes increasingly important. We know it's important to not share our passwords and carefully manage account information, but did you know your sensitive information can be breached without your knowledge directly from your pocket in everyday places? Luckily, there's protection by way of "RFID wallets", officially referred to as RFID blocking devices."
